SUMMARY

MCA graduate and programmer at Aditya university with hands-on experience in Python, SQL, and C programming. Skilled in web development using HTML, CSS, JavaScript, Bootstrap. Experienced in debugging and managing programming labs, with exposure to deep learning and computer vision projects. Proficient in IDE configuration, technical support and problem solving. Seeking an entry-level software developer role to contribute technical and grow in the IT industry.

WORK EXPERIENCE

Programmer| **Aditya University**
2025-Present

- Developed and maintained lab programs for courses such as C, Python, SQL, Power BI and Data Structures, ensuring smooth execution and accurate output across different systems.
- Assisted faculty and students in debugging, compiling, and optimizing code for academic and research projects.
- Developed and maintained laboratory manuals, sample codes, and automation scripts to streamline practical sessions.
- Configured and managed software environments, IDEs, and system setups for programming laboratories.
- Troubleshoot hardware and software issues in computer labs, including system crashes, compiler errors, and network connectivity problems.
- Provided technical support for programming competitions, workshops, and student hackathons.
- I Played a key role in transforming the lab into a highly efficient, technology-driven learning environment.

EDUCATION

Master of Computer Applications (MCA**)**
VSM Degree College – Ramachandrapuram **7.8** CGPA [2022-2024]

Bachelor of Science (BSc MPC)
VSM Degree College – Ramachandrapuram **6.9** CGPA [2019-2022]

Intermediate (MPC)
Sree Siddhartha Junior College – Angara **7.6** CGPA [2017-2019]

SSC
Z.P.P High School – Penugonda **6.5** CGPA [2016-2017]

SKILLS

Frontend: HTML, CSS, Bootstrap, JavaScript
Backend: Python**,** C-Language basics
Database: SQLITE
Other skills: Flexbox OOPs, Problem Solving, Ms Excel, Typing, Ms Office, Power BI

PROJECTS

Smart Voting System Using Deep Learning Techniques

Developed a smart voting system using deep learning Techniques for highly secured voting

- Online voting system in which the election data is stored and processed.
- To achieve higher level of security, one levels of authentication techniques are used.
- The authentication technique used is a Face Detection and Recognition system.
- In this method of authentication the voters face image captured during the registration is compared with the image captured by the webcam at the time of casting vote.
- After the first level of authentication is done a voter can casting the vote
- These techniques provide a more secure platform thus overcoming vulnerabilities of the traditional voting system.
- We use OpenCV, Flask are the python package and Haar cascade Algorithm

Technologies Used: Python ,Flask, Deep Learning Techniques, Haar cascade Algorithm, OpenCV, Tenser flow.

Todos Application(sriTodos.ccbp.tech)

Developed persistent Todo application with CRUD operations to track list of tasks

- Displayed list of Todo with HTML list elements ,styled Todo list using CSS ,Bootstrap
- Implemented Todo crud operations by using JavaScript event listeners and updated UI Dynamically by using DOM operations.
- Used Arrays ,Objects and their methods during Todo list CRUD operations, Persisted Todo list state on page reload using local storage methods.

Technologies Used: HTML, CSS, JavaScript, Bootstrap
