Pranav H Unnithan

Bangalore, India
+91 9606585473 | pranavh204@gmail.com | LinkedIn | GitHub

Education

PES University **2022 – 2026**
4th year, B.Tech in Computer Science and Engineering *Bangalore, Karnataka*

Delhi Public School Whitefield **2020 – 2022**
Class XII — 84.6% *Bangalore, Karnataka*

Deens Academy Whitefield **2020**
Class X — 92.4% *Bangalore, Karnataka*

Technical Skills

Programming Languages: Python, Java, MySQL
Web Development: HTML, CSS, JavaScript
Libraries: Pandas, NumPy, Scikit, Pytorch, Matplotlib, Seaborn

Internship Experience

Omkara Crystal Clear Magic Foundation **Jun 2024 – Jul 2024**
Full Stack Intern *Bangalore, India*

- Created a visually appealing and responsive website for organizational use.
- Developed frontend modules using HTML, CSS, and JavaScript.
- Built a backend system in PHP to handle dynamic content and workflow logic.
- Configured MySQL database for secure storage of project details.

Projects

Capstone Project:WiFi RSSI-Based Indoor Positioning with Multi-Stage Filtering and Real-Time Deployment

- This paper presents a comprehensive end-to-end framework for WiFi RSSI-based indoor localization that is adaptable to different indoor environments.
- The framework comprises four main modules: data collection, indoor positioning, output filtering, and accuracy evaluation.
- We developed a custom Android application for RSSI fingerprinting across a seven-floor university building, collecting 4,168 data points from 245 BSSIDs across approximately 84 routers (university network routers).
- The positioning module employs KNN algorithms deployed via ONNX Runtime for real-time inference on mobile devices.
- A novel multi-stage filtering pipeline combining EWMA, Kalman filtering, and position constraint mechanisms ensures stable and realistic position tracking.

Payroll Management System | *Java, Spring Boot, MySQL*

- Built a web-based payroll system using Java, Spring Boot, and Spring Data JPA.
- Implemented secure REST APIs for employee and payroll CRUD operations.
- Used MVC architecture and Repository Pattern for clean modular development.
- Integrated MySQL for persistent data storage and used Postman for API testing.

AI Customer Support Chatbot with Analytics Dashboard | *Python, Flask, MySQL, JavaScript*

- Built an intelligent support chatbot capable of intent recognition and sentiment analysis to handle real-time customer queries.
- Trained and evaluated multiple ML models (SVM, Naive Bayes, Logistic Regression, Random Forest) to optimize accuracy.
- Integrated MySQL database for order tracking, ticket management, and product info.
- Developed a dashboard with interactive analytics to visualize model performance, intent trends, and user satisfaction.

Certifications

TCS iON Career Edge - Young Professional **28 Sept 2024**
