AJAY VISHNU KEDAR

SOFTWARE TEST ENGINEER | MANUAL & AUTOMATION TESTING | API | SELENIUM | JAVA
Pune, India | +91-77689 90855 | qakedarajay@gmail.com

PROFESSIONAL SUMMARY

Results-driven **Software Test Engineer with 4+ years of experience** in **Manual Testing, Automation Testing, and API Testing** across **Banking, Fintech, ERP, and Telecom** domains. Specializes in building robust test coverage for complex, integrated applications using **Selenium WebDriver, Java, TestNG, Maven, Jenkins, REST Assured, Postman, SQL, and Git/GitHub**. Strong background in **STLC, SDLC, Agile/Scrum, defect lifecycle management, and CI/CD-oriented testing**. Known for translating business and technical requirements into scalable test strategies, improving product quality, reducing production defects, and accelerating release cycles in fast-paced environments.

CORE COMPETENCIES

- Manual Testing (Functional, Regression, System, Integration, UAT)
- Automation Testing (Selenium WebDriver, TestNG, Maven, Jenkins, REST Assured)
- API Testing (Postman, REST APIs, Swagger, JSON/XML Validation)
- Defect Management & Test Management (JIRA, AIO Tool, HP ALM)
- SQL & Database Testing (MySQL, SQL Server, MongoDB – basic validation)
- Agile/Scrum, Sprint Testing, Story Grooming, Daily Standups
- Test Case Design Techniques (BVA, ECP, Decision Table, State Transition, Error Guessing)
- CI/CD-Aware Testing, Version Control (Git/GitHub), Build & Deployment Support

TOOLS/PLATFORMS

JIRA, AIO Test Management, HP ALM, GitHub, Jenkins, Eclipse/IntelliJ IDEA, Postman, Swagger, SQL Server, MySQL, MongoDB

PROFESSIONAL EXPERIENCE

Software Test Engineer
Stoic & Salamander Global Corporation – Pune, India
May 2025 – Present
Domain: Banking – Loan Origination System (LOS) & Loan Management System (LMS)
Environment: Java, Selenium WebDriver, TestNG, Maven, Postman, REST APIs, JIRA, SQL, Agile/Scrum

- Analyzes **business requirements, user stories, and change requests** for LOS and LMS, creating detailed test scenarios, end-to-end flows, and requirement traceability to ensure complete coverage for customer onboarding, credit checks, loan creation, and repayment journeys.
- Designs and executes **Functional, System, Integration, Smoke, Sanity, and Regression test suites** for LOS/LMS modules, validating loan origination steps, underwriting workflows, disbursement logic, and repayment schedules across multiple products and interest structures.
- Performs **API testing using Postman** for customer onboarding, KYC verification, loan approval, disbursement, repayment updates, and collection workflows, validating HTTP methods, status codes, payloads, headers, and error responses, and documenting results for development teams.
- Validates **EMI schedules, interest calculations, late fees, foreclosure rules, and reversal scenarios** using both UI and backend SQL queries, ensuring that financial calculations match business rules and regulatory expectations across multiple loan types.
- Uses **JIRA** to log, track, prioritize, and retest defects, participating in **defect triage meetings** with BAs, developers, and product owners to clarify issues, reduce reopen rates, and drive timely resolutions before release cutoffs.
- Collaborates closely with **cross-functional teams (BA, Dev, DevOps, Product Owners)** in Agile ceremonies—sprint planning, daily standups, grooming, and retrospectives—to refine acceptance criteria, identify test dependencies, and align testing timelines with release plans.
- Creates and maintains **regression test suites and reusable test data** to support frequent releases, ensuring that new enhancements and defect fixes do not negatively impact critical LOS/LMS functionalities or core banking integrations.
- Prepares **comprehensive test execution reports, defect metrics, risk assessments, and QA sign-off documentation** for each release, providing clear visibility into quality status, known issues, and readiness for UAT and production deployment.
- Contributes to **continuous improvement** by suggesting test process enhancements, updating test case repositories, and aligning practices with evolving **KYC, AML, and regulatory guidelines**, strengthening compliance coverage in the test strategy.

Software Test Engineer
SCS TECH INDIA Pvt Ltd – Pune, India
Dec 2023 – May 2025
Domain: ERP – Integrated Solid Waste Management (ISWM) for Municipal Corporation
Environment: Java, Selenium WebDriver, TestNG, Maven, Postman, AIO Tool, JIRA, MongoDB/SQL, Agile/Scrum

- Interpreted **functional requirement specifications and user stories** to build structured test plans, test scenarios, and test cases in **AIO test management tool**, covering GPS-based tracking, RFID-based vehicle identification, waste collection, and route planning workflows.
- Conducted **Functional, System, Integration, Smoke, Sanity, and Regression testing** across web and mobile modules, ensuring accurate capture of collection data, route assignments, vehicle status, and compliance with city-level service-level agreements (SLAs).
- Implemented and executed **API tests using Postman** to validate endpoints for route assignments, vehicle tracking, waste collection logs, user authentication, and reporting services, verifying response codes, JSON payloads, and integration behavior with backend services.
- Developed and executed **automation scripts in Selenium WebDriver with Java and TestNG**, applying Page Object Model (POM), data-driven testing, and reusable methods to increase test execution speed and reduce effort for repetitive regression cycles.
- Utilized **MongoDB/SQL** for backend testing, validating that route master data, GPS logs, user profiles, and waste collection records are stored, updated, and retrieved correctly according to business rules and operational workflows.
- Used **JIRA** to manage the complete defect lifecycle—logging, categorizing, prioritizing, assigning, retesting, and closing issues—while coordinating with developers and business stakeholders to ensure that high-impact issues are addressed before production release.
- Applied advanced **test design techniques** such as **Boundary Value Analysis, Equivalence Class Partitioning, Decision Tables, State Transition, and Error Guessing** to enhance test coverage and uncover edge-case defects in routing, data sync, and reporting modules.
- Participated in **Agile ceremonies**, including sprint planning, backlog refinement, daily standups, and retrospectives, providing accurate test estimates, progress updates, and quality metrics while aligning testing efforts with sprint goals and release timelines.
- Prepared **daily status reports, consolidated test summaries, defect trend dashboards, and regression coverage reports**, enabling leadership and project managers to make informed decisions about production readiness and future enhancement priorities.

Software Test Engineer
Code Icons Technology – Pune, India
Oct 2021 – Dec 2023
Domain: Banking – Capital Markets, Retail Banking, Investment Accounts
Environment: Java, OOPS, Playwright, TestNG, Maven, JIRA, Postman, GitHub, SQL

- Tested **banking and capital market applications** including account opening, KYC onboarding, payments, trade booking, settlements, fund transfers, and investment portfolio updates across multiple banking modules.
- Designed and executed **Functional, System, Integration, End-to-End, Regression, and UAT** test cases for savings/investment account setup, transaction processing, limit validations, trade lifecycle events, and customer servicing workflows.
- Performed **API testing using Postman** to validate account services, payment services, portfolio services, market order execution, settlements, and reporting APIs with request/response and schema validations.
- Conducted **SQL-based backend validation** for customer profiles, transaction logs, ledger postings, interest calculations, portfolio positions, settlement records, reconciliation entries, and audit/compliance data.
- Built and maintained **Playwright automation scripts using Java and OOPS principles** to verify UI flows such as login, account creation, trade placement, fund transfers, and transaction history review with reusable components.
- Worked closely with **business analysts and SMEs** to understand capital market workflows—order matching, NAV updates, risk checks, settlement cycles—and ensured expected behavior across integrated banking systems.
- Participated in **Agile/Scrum** ceremonies, reviewed user stories, finalized acceptance criteria, estimated testing scope, and shared sprint-level test results and defect summaries with cross-functional teams.
- Prepared detailed **test documentation** including test cases, test data, execution logs, defect reports, and final test summary reports to support audits, compliance checks, and release readiness.

EDUCATION
Bachelor of Engineering (Electrical Engineering)
Solapur University – Maharashtra, India | 2021
