Achal Ghugare

Java full stack developer
Pune, India | +91 8459007361| ghugareachal29aug@gmail.com

Professional summary

Results-driven Full Stack Software Engineer with 3+ years of expertise in enterprise Java development, microservices architecture, and cloud-native applications. Proven track record of designing scalable distributed systems, optimizing database performance, and delivering high-impact solutions across government and healthcare domains. Skilled in modern frameworks, CI/CD pipelines, and Agile methodologies with strong focus on code quality and system reliability. Strong expert in understanding the requirements and building the code based on the design documents.

Technical Skills

- Languages: Java (8), SQL, JavaScript, HTML5, CSS3
- Backend & Frameworks: Spring Boot, Spring MVC, Spring Cloud, Hibernate ORM, Spring Data JPA, Spring Security, RESTful APIs, Microservices Architecture, Event-Driven Design
- Frontend Technologies: React.js, Angular, Thymeleaf, Bootstrap, Responsive Web Design
- Databases: PostgreSQL, MySQL, Oracle Database, JDBC, Database Design, Query Optimization
- DevOps & Tools: Git, GitHub, Docker, Kubernetes (basics), Maven, Gradle, Tomcat, IntelliJ IDEA, VS Code, Eclipse, Postman
- Microservices & Integration: Eureka Service Discovery, RabbitMQ, Keycloak, OAuth 2.0, JWT Authentication, API Gateway
- Testing & Quality: Mockito, Integration Testing, Unit Testing, Test-Driven Development (TDD)
- Methodologies: Agile/Scrum, CI/CD, Code Review, Design Patterns, System Design, Performance Optimization

Experience

Application Developer | Pyramid Consulting | Feb 2025 – Present

Working on the Vision project, developing enterprise-level billing and payment management applications for utility clients

Working as a Client-side Application Developer for Oracle Utilities Customer Care and Billing (CC&B).

- Developed backend services using Java 8, Spring Boot, and RESTful APIs for Payment and Collection modules.
- Designed and implemented business logic for Payment Processing, Payment Arrangements, Write-offs, and Customer Account Management.
- Configuring and enhancing Payment Processing, Collection workflows, and Customer Account Management.
- Developing and supporting Plug-In Scripts, Algorithms, Zones, and Business Objects.
- Built secure REST APIs to integrate frontend UI with backend services.
- Integrated frontend with backend using JSON-based API communication.

Associate Consultant | EWG Services Pvt Ltd | Jun 2022 – May 2024

- Engineered a high-throughput billing system for Malaysian government utilities, processing 100K+ daily transactions with 99.8% accuracy
- Implemented event-driven microservices using Spring Boot and RabbitMQ for asynchronous processing of meter enrollment, cancellation, renewal, and complex bill calculations

- Designed robust Oracle database schemas with stored procedures and triggers, optimizing transaction processing and ensuring ACID compliance
- Developed RESTful APIs with comprehensive error handling, rate limiting, and API versioning, serving 20+ downstream applications
- Integrated Spring Security with OAuth 2.0 for secure inter-service communication and external client authentication
- Utilized Docker containerization and Eureka for service discovery, enabling zero-downtime deployments and automatic failover
- Collaborated with cross-functional teams in Agile sprints, participating in code reviews, pair programming, and technical design

Education

- Master of Computer Applications (MCA)2024- Pursuing
- Bachler of Commerce & Computer Applications (BCCA)(2021) G.H. Raisoni Institute of Information Technology

Certificates

- Java Full Stack Development
  December 2021- Feb 2022 | Sathya Technologies | Hyderabad

Project Highlight

Role: Application Developer
Duration: Feb 2025 – May 2025
Developed a full-stack web application to manage Customer Accounts, Payments, Payment Arrangements, and Collection workflows for a utility billing system.
Key Contributions

- Designed and developed secure RESTful APIs using Java 8 and Spring Boot for payment processing and account management.
  Implemented core business logic for:
  Payment validation and transaction posting
  Payment Arrangement configuration
  Write-off processing
  Automated collection workflow management
- Built backend services using Spring Boot + Hibernate (JPA**)** with optimized entity mapping and transaction management.
- Designed relational database schema and wrote complex **Oracle SQL queries**, improving query performance and reducing response time.
- Developed scheduled batch jobs for automated payment reconciliation and transaction processing.
- Implemented global exception handling and centralized logging for improved system reliability.
- Integrated frontend UI with backend APIs using JSON-based REST communication.
- Followed Agile methodology and participated in sprint planning and code reviews.
