Objective

MCA postgraduate with a diploma in IT Infrastructure and Cyber SOC Analysis, backed by hands-on experience in Python. Equipped with strong problem-solving and communication skills. Seeking a challenging role in cybersecurity or Python development to leverage my technical and analytical capabilities.

Education

Master of Computer Applications (MCA)

Musaliar College of Engineering & Technology, Pathanamthitta 2023 – 2025

Bachelor of Computer Applications (BCA)

College of Applied Science, Adoor 2019 – 2022

Certified IT infrastructure and Cyber SOC Analyst(CICSA)

Redteam Hacker Academy, Trivandrum 2022 – 2023

Cybersecurity Analyst (CYSA+)

Redteam Hacker Academy, Trivandrum 2025

Certifications

- Certified IT Infrastructure and Cyber SOC Analyst

  Redteam Hacker Academy, Trivandrum
- NPTEL Online Certification: Database Management System

  Indian Institute of Technology, Kharagpur
- Certification of Training Python,Django and MySQL

  Infodawn Software Development and Training, Pathanamthitta

Projects/ Labs

- **Signature Fraud Detection**: Developed a Signature Verification System to enhance the security and authenticity of official college documents by automating signature verification. The system uses deep learning and image processing techniques for feature extraction, pattern recognition, and classification. It captures and preprocess signatures, extracts unique features, and detects forgeries with high accuracy. This automation significantly improves verification efficiency, reduces manual workload, and prevents document fraud.
- **Terra-lease**: Developed a Land Leasing Advertisement Platform using Python and Django to connect land owners with potential tenants. The platform enables landowners to easily list and manage their land advertisements, communicate with tenants, and handle secure online payments. Tenants can efficiently search for suitable land and make initial payments through the platform. Designed with a focus on user-friendliness, efficiency, and security, the system streamlines the land leasing process while leaving the final legal agreements to be managed offline.
- **Practiced labs** in TryHackMe, PortSwigger, Hackthebox

Skills

- Technical Skills: Python, C, C++, Java, PHP, OOP
- Web Development: Django, HTML, CSS, JavaScript
- Database: MySQL, SQL
- Tools & Platforms: TryHackMe, PortSwigger, HackTheBox
- Soft Skills: Problem Solving, Logical Thinking, Communication,Teamwork
