ABOUT ME

Enthusiastic Computer Applications graduate with hands-on experience in full stack web development using Python, Django REST Framework, and React.js. Built a E-Hospitality Management System with role-based authentication for patients, doctors, and administrators. Strong foundation in REST APIs, database-driven applications, and DevOps tools. Quick learner, adaptable, and eager to contribute to a software development team.

EDUCATION

Python – Inmakes Infotech (2025)

DevOps - Techmindz Software Training Institute (2025)

Bachelor Of Computer Application – AJK College of Arts and Science (2021-2024)

Higher Secondary Education – CVM Higher Secondary School (2019-2021)

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, Bash

Backend: Django, Django REST Framework

Frontend: React.js, HTML, CSS

Databases: MySQL, PostgreSQL (Basics)

Cloud Platform: AWS

DevOps & CI/CD: Jenkins, GitlabCI/CD, Docker, Kubernetes

IaC & Configuration Management: Terraform, Ansible

Version Control: Git, GitHub, GitLab

Operating Systems: Linux, Windows

PROJECT EXPERIENCE

E-Hospitality Management System

Tech Stack: Django REST Framework, React.js, MySQL, JWT, Git.

Developed a full-stack E-Hospitality Management System with role-based authentication using JWT to ensure secure access for patients, doctors, and administrators. Implemented a patient module for booking appointments and viewing medical records, along with a doctor dashboard to manage schedules and approve or reject appointments. Built an admin panel to manage doctors, departments, and approval workflows. Designed and developed RESTful APIs to enable seamless frontend–backend communication, and implemented secure user registration, login, and access control mechanisms.
