Professional Summary

Computer Science graduate with a strong interest in cybersecurity and backend development. Gained hands-on experience in ethical hacking, vulnerability assessment, and Django-based web applications through academic projects and self-driven learning. Built and deployed a live vulnerability assessment platform, applying practical security concepts while continuously improving technical skills.

Education

Bachelor of Technology (B.Tech) — Computer Science & Engineering (Cyber Security)
Sagar Institute of Research and Technology, Bhopal 2021 – 2025
CGPA: 7.62

Senior Secondary (Class XII)
St. Xavier's Sr. Sec. Co-Ed School, Bhopal 2021
Percentage: 73.4%

Secondary (Class X)
St. Xavier's Sr. Sec. Co-Ed School, Bhopal 2019
Percentage: 70.3%

Technical Skills

Cybersecurity: Ethical Hacking, Penetration Testing, Vulnerability Assessment
Programming & Backend: Python, Django, Bash
Web Technologies: HTML, CSS, JavaScript
Security Tools: Nmap, Burp Suite, Metasploit, Wireshark, OpenVAS, Hashcat, Aircrack-ng
Operating Systems: Kali Linux, Linux
Version Control: Git, GitHub

Projects

Live Vulnerability Assessment Platform Xscan(Django)
https://xscan-4ohb.onrender.com — https://github.com/yash-singh152/Xscan

- Designed and developed a secure Django-based web application for vulnerability assessment.
- Implemented authentication, scan workflows, and result visualization.
- Deployed the application to production on Render with secure configurations.

Packet Sniffer Using Python
https://github.com/yash-singh152/Packet-sniffer-python

- Developed a real-time Python-based packet sniffer to monitor network traffic.
- Captured and analyzed packets at the IP layer, identifying source and destination addresses and protocols.
- Utilized *Scapy* and *Socket* libraries for efficient packet inspection.
- Gained practical insights into network vulnerabilities and security monitoring.

Directory Brute Force Tool
https://github.com/yash-singh152/Directory-Brute-Force-Tool

- Developed a Python-based directory brute force tool to discover hidden web directories.
- Implemented multi-threading to accelerate scans and optimize response time analysis.
- Automated HTTP requests using *requests* and *concurrent.futures*.
- Applied the tool in real-world security assessments to identify unsecured directories.

Mentor Map — Personalized Roadmap Generator

- Built a responsive full-stack web application to generate personalized learning roadmaps.
- Analyzed user inputs such as career goals, skills, and education level.
- Delivered customized learning paths for cybersecurity, development, and data science domains.
- Implemented user authentication, progress tracking, and interactive UI.

Malware Analysis — Static & Dynamic Investigation

- Conducted in-depth malware analysis of a backdoor trojan using static and dynamic techniques.
- Performed hashing, string analysis, sandboxing, and runtime behavior monitoring.
- Utilized Procmon, CurrPorts, TCPView, VirusTotal, and Hybrid Analysis.
- Identified persistence mechanisms and command-and-control (C2) behavior.
- Generated Indicators of Compromise (IOCs) for threat detection.

Dark Web Exploration for Threat Intelligence

- Researched dark web marketplaces using Tor Browser to analyze illicit ecosystems.
- Identified hacking services, stolen credentials, identity theft, and anonymity services.
- Demonstrated dark web monitoring as a proactive source of OSINT-based threat intelligence.

Declaration

I hereby declare that the information provided above is true to the best of my knowledge.
