Education

Christ University, Pune Aug 2024 - Apr 2026
M.Sc. in Data Science (Statistics, Applied Mathematics)
Relevant Coursework: Machine Learning, Deep Learning, NLP,FastAPI,Django, Data Structures with Applications,Design and Analysis of Algorithms,Software Engineering,Operating Systems, Object Oriented Programming

Skills

Programming: Python, SQL,Java (Basics)

GenAI & LLMs: LangChain, RAG, Prompt Engineering, OpenAI API, Groq API

Backend & APIs: FastAPI, Django, REST

Machine Learning: Regression, Classification, NLP, Time Series, Deep Learning, Model Evaluation

Libraries: Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch, Selenium

DevOps: Git, GitHub, GitLab, Docker

Databases: MySQL, PostgreSQL, MongoDB

Tools: Postman, Jupyter Notebook, Jira, Power BI,Linux, Bash, Google Docs

Work Experience

VproTech Digital | **Completion Certificate** 1 Nov 2025 - 2 May 2026

AI & Backend Developer Intern

- Successfully completed a **6-month internship** focused on **Artificial Intelligence and Backend Development**
- Followed **Software Development Life Cycle (SDLC)** practices in an **Agile sprint environment**, contributing to **LLD, backend development, debugging, Unit Testing, Integration Testing, and System Testing**

Project

AuraSync – AI-Driven Emotion & Behavioral Analysis Platform

- Developed an **AI-driven multimodal platform** for analyzing human emotions and behavioral patterns using **computer vision, NLP, and audio intelligence** from real-world user interactions.
- Designed scalable **RAG and LLM-based backend systems** including **Core Values Extraction Pipeline, HR Policy Assistant, and AI Interview Feedback modules** using **Groq LLMs, FAISS, HuggingFace embeddings, Django, and structured JSON validation**.

VirtuFit: AI-Powered Virtual Dressing Room (Computer Vision + Backend)

- Developed a **real-time AI-powered virtual try-on system** using **Django, OpenCV, and MediaPipe** with low-latency video streaming and backend integration.
- Built scalable **REST APIs** and **MJPEG streaming services** for cloth selection, camera control, and real-time user interaction using Django backend.
- Implemented **pose estimation, gesture recognition, and multi-threaded processing** to improve system performance, responsiveness, and user experience.

AI Chat DB – Intelligent SQL Chat Agent (Python Backend System) | **GitHub**

- Developed a **Python-based NL-to-SQL backend system** using **FastAPI, LangChain, SQLAlchemy, and LLM APIs** for intelligent database query generation.
- Built scalable **RESTful APIs** with **asynchronous processing, context-aware chat architecture, and multi-LLM integration (OpenAI, Groq)** for real-time query execution.
- Containerized the application using **Docker** and designed an interactive frontend for efficient chat-based data exploration and deployment consistency.

Achievements

- Solved **105+ Data Structures and Algorithms problems** on **LeetCode** using Python And Earned the **LeetCode 50 Days Badge 2026** for maintaining consistent problem-solving practice.
- Participated in **Hackverse Hackathon**, focusing on **Data Science applications** and real-world problem solving
