AADITYA SHUKLA

Python Developer

aadityashukla0003@gmail.com 6378410962 linkedin.com/in/aaditya-shukla-python-developer Bengaluru , India

SUMMARY

Python Developer with hands-on experience in Python backend development, FastAPI, and AI integrations. Built and deployed 2 live projects independently — an AI fitness assistant using FastAPI and Groq LLM, and a complete freelance business website for a real client. Comfortable working across backend systems, REST API design, and basic frontend development. Known for shipping complete working products from scratch to live deployment and managing real client relationships professionally.

EXPERIENCE

Remote, *Freelance Developer* 2025 – Present

- Independently delivered 1 complete client project (SourceNest) — handling everything from design and development to domain integration, hosting and live deployment with zero external support
- Managed direct client communication over 1 month, handling 10+ revision cycles and iterative customization requests while keeping the project on track and delivering on time
- Took client from zero online presence to a fully live, mobile-responsive website — making their import-export business discoverable online for the first time
- Demonstrated professional reliability — client satisfaction led to an immediate commission of a second web application project, confirming trust in quality of delivery
- Gained real-world experience in client expectation management, deadline handling, and solo end-to-end product ownership

Celebal Technologies, *Web Developer Intern* 06/2024 – 08/2024 | Bengaluru , India

- Contributed to frontend development tasks using React.js during a 2-month summer internship
- Worked on building and styling UI components, gaining exposure to component-based development and team workflows
- Participated in code reviews and daily team collaboration, learning industry practices for code quality and version control using Git
- Applied frontend concepts in a professional environment that later supported independent project development

PROJECTS

BODYCODE – AI Fitness Assistant , *(Python, FastAPI, Groq API, HTML/CSS/JS)*

- People seeking fitness guidance had no single conversational tool that could handle structured workout plans, exercise lookups, and open-ended fitness questions — they had to switch between multiple apps and websites
- Sole developer responsible for designing and building the complete product — FastAPI backend, AI routing logic, LLM integration, and a fully responsive 6-section frontend UI — from scratch to live deployment
- Built a FastAPI backend with a 3-tier intelligent query routing system — fitness goal keywords trigger a custom workout_plan_tool() generating structured weekly plans, exercise keywords hit exercise_info_tool() pulling real-time Wikipedia summaries, and all other queries fall through to Groq's llama-3.1-8b-instant LLM. Independently built a 6-section frontend (AI Chat, Workout Generator, Meal Planner, Progress Tracker, Challenges, About) in vanilla HTML/CSS/JS — zero external UI libraries — with async API calls, animated sidebar navigation, and fully responsive mobile layout. Deployed end-to-end on Render
- Shipped a complete, live AI fitness web app as a solo developer — covering 6 features across 1 unified interface, built with 0 external UI dependencies, deployed at ₹0 infrastructure cost, combining rule-based logic and LLM intelligence in a single product

SourceNest – Freelance Business Website , *Tech Stack: HTML, CSS, JavaScript*

- An import-export stationery business had zero online presence — potential global buyers and suppliers had no way to discover or contact them, losing business to competitors already established online
- Sole developer hired to design, build and deploy a complete 6-page professional business website from scratch — handling everything from code to live deployment within a 1-month deadline
- Built 6 pages (Home, Services, Buyers, Suppliers, Quality, Contact) featuring a fullscreen video hero, auto-sliding image carousel, responsive 4-card grid layout, mobile hamburger navigation, WhatsApp direct chat integration, and a contact form. Integrated client-provided domain, managed hosting and deployment independently, and handled 10+ revision cycles across 4 weeks without missing the deadline
- **Result:**
- Reduced client's time-to-contact for buyers from days to instant via WhatsApp button integration
- Achieved 100% mobile responsiveness across all screen sizes — expanding potential reach to mobile users
- Delivered all 6 pages within 1 month despite continuous revision requests
- Took client from 0 to fully live online presence — making the business discoverable on the internet for the first time
- Client satisfaction led to immediate commission of a second web application project within the same month

TECHNICAL SKILLS

Languages
Python , HTML

Backend Development
FastAPI, API Design, API Endpoint Development

Databases
MySQL

Tools & Technologies
Git, GitHub, VS Code, Render, Netlify

Concepts
OOP, Software Architecture, Debugging, End-to-End Deployment, Client Communication

EDUCATION

B.Tech in Computer Science (AI), *Poornima College of Engineering, India* 2025

Higher Secondary (12th) 2021

Secondary (10th) 2019
