## OBJECTIVE

Software Engineer with 3 years of expertise architecting and scaling mission-critical systems. Proven ability to translate complex engineering challenges into reliable, high-performance platforms that drive rapid business growth.

## SKILLS

| | |
|---|---|
| **Languages** | Java, SQL, JavaScript |
| **Backend** | Spring Boot, Hibernate |
| **Frontend** | Angular, Vue.js |
| **Databases** | PostgreSQL, OracleDB, MySQL, MongoDB |
| **Technologies** | Docker, Kubernetes, Redis, Kafka, Apache Spark, AWS |

## EXPERIENCE

**Software Engineer** Oct 2023 - Present
CSM Technologies | Client : Government of India *India*

- Built a **high-scale platform for national mining operations** with microservices system using **Spring Boot** to decouple the high-traffic Mineral Tracking module from the Vendor Onboarding module, ensuring that spikes in real-time transport tracking data did not degrade the performance of the licensing portal.
- Accelerated **API performance by 60%** (reducing P99 latency from **500ms to 200ms**) by implementing **Redis as** a cache and optimizing heavy SQL queries within PostgreSQL.
- Automated complex vendor workflows by building a **custom engine** that digitized manual approvals, slashing **processing time from 5 days to 4 hours** and eliminating manual data entry errors.
- Built a **fault-tolerant event-driven architecture** using **Apache Kafka** to decouple services, handling peak loads of **10k+ events/minute** with zero data loss and ensuring **99.9%** system availability.
- Optimized **large-scale batch processing** for nightly reconciliation of mining data, reducing job execution time by **40%** through **parallel processing** and efficient **database indexing and partitioning strategies**.
- Engineered a **secure RBAC system** integrating **Spring Security and OAuth2** to manage authentication for **50,000+** government and vendor users, ensuring **100%** compliance with strict state data privacy regulations.

## PROJECTS

### Event-Driven Order Processing System (Java, Spring Boot)

- Built a scalable order processing system using Spring Boot and Kafka to handle asynchronous order creation and status updates.
- Improved API performance by **45%** using Redis caching and optimized database queries.
- Implemented secure REST APIs with JWT-based authentication and deployed the application using Docker.

## EDUCATION

**Master of Computer Applications (MCA)**, Biju Patnaik University of Technology 2019 - 2022
