OBJECTIVE

B.Tech Computer Science graduate with strong fundamentals in programming and problem-solving, seeking an entry-level opportunity to apply technical knowledge, improve communication skills, and contribute effectively in a professional environment.

PROJECTS

Heart Disease Prediction using ML Algorithms

Developed a system to predict heart disease using patient data, comparing models like Logistic Regression, Decision Tree, Random Forest, SVM, KNN, and Linear Regression. Performed data preprocessing (missing value handling, feature scaling, key feature selection) to improve model accuracy. Used Python with Pandas, NumPy, Scikit-learn, and Matplotlib for data analysis, model building, and result visualization.

SkillSphere - Personal Skill Dashboard

Developed a web-based dashboard for tracking and visualizing skill growth. Implemented CRUD operations, skill-level analytics, and a responsive UI for seamless user experience. Designed a clean Bootstrap-based interface showing categories, progress bars, and editable skill cards.

Mental Health Chatbot

Built an AI-powered chatbot using Python, Streamlit, and Gemini to support mental health conversations in multiple languages. Integrated speech recognition, translation, and text-to-speech for a voice- interactive experience across different users. Used FAISS for vector search and custom medical Q&A to provide accurate, empathetic, and context-aware responses.
