Sureshkumar G

suresh333187@gmail.com +91-9342630798 sureshkumar |linked-in
Location prepared: Chennai/ Bangalore

Profile Summary

Motivated and passionate **Software Developer & Front-End Developer** Fresher with strong skills in HTML, CSS, JavaScript, Python, and Java. Eager to design and develop user-friendly web applications while learning new technologies. Quick learner with a focus on writing clean, efficient, and responsive code.

Educations & Certifications

Ramco Institute of Technology, Rajapalayam, Tamil Nadu, India — Oct 2021 – May 2025
B.E. in Electronics and Communication Engineering (Affiliated with Anna University)
CGPA: 6.9/10

Nadar Higher Secondary School, Rajapalayam, Tamil Nadu, India — Jun 2020 – Mar 2021
(HSC) percentage: 77.5/100

Nadar Higher Secondary School, RajapalayamTamil Nadu, India — Jun 2018 – Mar 2019
(SSLC) percentage: 66.8/100

Technical Skills

- Java
- MySql
- Web Development
- Git and Github

Internship

IOT, Kevell Corp, Madurai — May 2024 – July 2024

- Gained Hands-on experience in **Internet of Things (IoT)** concepts of device and Integration.
- Worked on **sensor-based projects** and **data communication** between hardware and software systems.
- Improved understanding of **embedded systems, programming** and **network connectivity**.

Machine Learning Intern, Geons logix, Madurai — Jan 2023 – July 2023

- Learned the fundamentals of **Machine Learning algorithms** and data preprocessing.
- Gained exposure to **Python libraries** like **Numpy, Pandas, Scikit-learn.**
- Worked on small-scale model training and evaluation tasks.

Projects

Line Follower Robort – Using Arduino

- The Line Following Robot project uses an Arduino to detect and follow a path marked on the ground using IR sensors.
- It controls motor movements based on sensor inputs, adjusting direction to stay on track.
- This project demonstrates basic robotics, sensor integration, and autonomous navigation principles effectively.

Smoke Detector - Using wifi module

- The Smoke and Humidity Detection project uses sensors connected to an Arduino and a Wi-Fi module to monitor environmental conditions in real time.
- It detects smoke levels and humidity, sending alerts or data to an IoT platform for remote access.
- This system is useful for safety, monitoring, and automation applications.

Design and analysis of self-diplexer microstrip patch antenna - using HFSS tool

- The SELF DIPLEXER MICROSTRIP PATCH ANTENNA project involves designing and simulating a dual-band antenna using HFSS for efficient multi-band communication.
- It ensures high isolation, low mutual coupling, and compact size, making it suitable for modern applications like 5G.
- Simulation results confirm good return loss, gain, replacing multiplexer with dual-ports and radiation performance for advanced wireless systems.

Certifications

- **Python Basics –** Scalar Topics
- **Workshop in E-vehicle –** Mepco Schlenynk Engineering College -Sivakasi

Languages

- English (Read, Write, Speak)
- Tamil (Read, Write, Speak)
- Telugu (Speak)

Personal Details

- Marital Status: Single
- DOB: 08 November 2003
- Place: Chennai

I hereby declare that all the details provided above are accurate and complete to the best of my knowledge.
