MUHAMED SAHAL

FULL-STACK DEVELOPER

Malappuram, kerala, 673642, India,

+91 7034137000 | sahalmuhammed.dev@gmail.com | LINKEDIN | PORTFOLIO | GITHUB

Professional Summary

Motivated and detail-oriented Full-Stack Developer with hands-on experience in Python, Django, and modern frontend technologies. Adept at building responsive web applications, integrating secure authentication systems, and managing end-to-end development lifecycles. Proven ability to work independently and as part of a team, with a strong foundation in both backend and frontend technologies.

Experience

Python Django Developer

Tefora Software Solutions LLP - Malappuram,Kerala

08/2025 - Present

- Developing and maintaining web applications using Python, Django, and PostgreSQL
- Building and integrating RESTful APIs for dynamic web functionalities.
- Assisting in debugging, testing, and optimizing backend code for performance.

Python Django Full-Stack Developer Trainee

G-TEC Education – Malappuram,Kerala

Jan 05, 2024 – Jan 30, 2025

- Trained in full-stack development using Python, Django, React, and PostgreSQL
- Gained hands-on experience in deployment, authentication, and REST API development

Education

Bachelor of Science in Computer Science — 70%

Calicut University – Malappuram *01/2020 - 01/2023*

E-Commerce & Internet Advertising

MIC Arts & Science College *01/2023 - 07/2023*

Higher Secondary (2018-2020, Science) – VHMHSS Morayur, Malappuram, Kerala — 81%

SSLC (10th, 2018) – VHMHSS Morayur, Malappuram, Kerala — 99%

Key Skills

- Frontend: HTML, CSS, JavaScript, Bootstrap 5, jQuery, React, Figma, Adobe XD, Tailwind CSS
- Backend: Python, Django, Django REST Framework, Tkinter, FastAPI
- Database: SQLite, MySQL, PL/SQL, PostgreSQL
- Tools & Platforms: GitHub, AWS, PythonAnywhere, Postman,
- Other Skills: JWT Authentication, RESTful APIs, Git, Email Integration, Responsive Design, DBdiagram, wireframing

Project

Wild Animal Detection AI System (College Major Project)

Team Size: 2 | Python, Deep Learning, Machine Learning

Developed an AI-powered wild animal detection system designed to enhance forest safety. The system uses deep learning models to detect animals through live camera feeds and automatically alerts forest officers when dangerous wildlife (e.g., lions, tigers, etc.) is identified.

Key Features:

- Real-time detection and classification of wild animals
- Three-level alert system based on the danger level of the detected animal
- Automatic alarm sound generation for high-risk animals
- Instant notification to forest authorities with detected animal information

This project helps prevent human–wildlife conflict by offering early warnings and improving forest surveillance efficiency.

APTMS – Academic Project Management System live-link

Developed a role-based internal academic management platform with **Admin, Mentor, and Student dashboards** to manage task assignment, submission, review, and progress tracking. Implemented **weekly task workflows**, **marks-based evaluation**, and **automated email notifications** for submissions and reviews. Designed **separate panels with secure role-based access control** to ensure data isolation and smooth academic operations. Built using **React (JSX), Django, Python, PostgreSQL**, and deployed on **DigitalOcean**.

Skills

- Communication Skills
- Programming
- Ability to Work in a Team
- Effective Time Management
- Ability to Work Under Pressure
- Fast Learner
- Ability to Multitask
- Advanced Analytical Thinking Skills

Languages

English , Malayalam, Hindi
