OBJECTIVE

Python/Django developer at BufferBytes, specializing in Backend engineering. Skilled in Python, Django, RESTful APIs, DRF, MySQL, and PostgreSQL, with a focus on designing efficient and scalable backend systems.

WORK EXPERIENCE

Backend Developer, *BufferBytes Technologies* 08/2025 – Present | Calicut

• Gained proficiency in Python, Data Structures, and Django.
• Built backend applications with APIs, database handling, and authentication systems.
• Developed CRUD applications and REST APIs for real-time data handling.

Backend Developer (Intern), *District Collector Idukki* 05/2025 – 08/2025 | Idukki

- Built the Grievance Management System for public complaint handling.
- Designed secure Django REST APIs and role-based workflows.
- Optimized MySQL/PostgreSQL schemas for fast reporting.

PROJECTS

Public Property Management System 2025

- Django REST backend for tracking public property records.
- Role-based access, structured data storage, and automated workflows.
- Implemented JWT-based authentication for secure user login and session management.

MessWala – Mess Management System 2024

- Backend system for mess expenses and monthly settlements.
- Multi-DB architecture with efficient CRUD APIs and automated calculations.
- Implemented JWT authentication to secure API endpoints.
- Implemented multi-tenant architecture to isolate client data and improve scalability.
