PYTHON DEVELOPER

Python Developer with experience in AI/ML model development and web application development using Django and Flask. Skilled in implementing data-driven solutions using NumPy, Pandas, Scikit-learn, TensorFlow, and RESTful APIs. Strong understanding of software development lifecycle, with a focus on clean code, performance optimization, and real-world problem-solving through AI and automation, Hands on experience on Aws cloud services like S3, Ec2, Glue, Sagemaker.

KEY COMPETENCIES

Languages

Python, JavaScript, C, SQL. HTML

Libraries & Frameworks

Scikit-Learn, TensorFlow, Keras, Numpy, Pandas, Matplotlib, Django, DRF, Flask, FastApi, Selenium

Database

MySql, DynamoDB, PostgreSQL, SqLite3

Other

Boto3, Git, GitHub, BitBucket, Bootstrap 5, Tailwind, CSS3, RestApi, Postman

---

PROFESSIONAL EXPERIENCE

LogiQlink Technologies **April 2025 - Present**

Python Developer

As a Python Developer at LogiQLink Technologies, I played a key role in developing and deploying a stock prediction application using advanced machine learning models such as Xgboost and LSTM, leveraging Python libraries including Scikit-learn, TensorFlow, and Pandas. I automated data collection and preprocessing pipelines from various financial APIs, significantly reducing manual efforts and improving real-time data accuracy. Working closely with cross-functional teams, I also integrated AWS services such as EC2, S3, Lambda, and SageMaker to deploy and scale machine learning models efficiently. To support data-driven decision-making, I developed a standardized reporting framework that enhanced visibility into key metrics and model performance. Additionally, I built RESTful APIs using Flask to serve predictions and other informations, and contributed to internal AI-driven automation tools that optimized repetitive data tasks.

Geminid system Inc. **Jan 2025 - March 2025**

Jr. Software Engineer

I worked on a Document Management System, focusing on creating and managing dynamic master templates for automated document generation. I collaborated with teams to implement client-specific requirements and supported the integration of these templates into the system. I also contributed to testing and validating core features of the product DocGen, ensuring functionality and performance in production environments. As part of the deployment and infrastructure process, I worked with AWS services such as S3, Lambda, and CloudWatch to support storage, automation, and monitoring of document workflows.

Kangaroo Software **Feb 2024 - July 2024**

Python Django Intern

At Kangaroo Software, I worked as a Python Django Developer on the development of a Learning Management System (LMS), where I contributed to building core features such as user management, course modules, and progress tracking. During this project, I gained hands-on experience with Django and Django REST Framework, developing APIs to support backend functionality and enable smooth integration with frontend components. This role helped strengthen my skills in backend development, RESTful architecture, and collaborative software development practices.

PROJECTS

TradeAstra

Tech Stack: Python, AWS (S3, EC2, SageMaker, Glue, Lambda), Scikit-Learn, Flask, Pandas, NumPy
Role: Backend & ML Developer

- Developed AI-powered stock prediction models using XGBoost trained on 5 years of Indian stock data.
- Integrated news sentiment analysis pipelines using NLP models to enhance prediction accuracy.
- Built REST APIs using FastAPI for real-time stock predictions, data visualization and News Sentiments.
- Designed and implemented scalable AWS architecture for model deployment and data processing.

Autoslot

Tech Stack: Python, FastAPI, Google Calendar API, LLM (OpenAI API), OAuth2
Role: Backend Engineer (AI + LLM Integration)

- Designed the backend architecture for a smart scheduling extension that integrates with Google Calendar via OAuth2.
- Built end-to-end flow for natural language meeting scheduling using LLM to parse and execute user queries.
- Developed secure API endpoints (JWT Enabled) to automate meeting creation, notifications, and interview scheduling workflows.
- Contributed to organization-level calendar integration supporting recruiters and hiring teams.

SkyTrace

Tech Stack: Python, Node.js, ThingsBoard CE, AWS (Kinesis, S3, EC2)
Role: Backend Engineer

- Developed edge-side Python modules on Jetson NX to capture video streams, manage device authentication, and push telemetry data to the cloud.
- Engineered the Node.js backend for authentication, API management, and AWS integration for Kinesis Video Streams and S3 storage.
- Integrated ThingsBoard CE for IoT device management, telemetry visualization, and real-time data communication via WebSocket.
- Contributed to system architecture ensuring scalable data flow from edge devices to cloud and frontend dashboards.

NL-Query

Tech Stack: Python, FastAPI, OpenAI API, SQLAlchemy, MySQL/PostgreSQL

- Developed a FastAPI-based backend that converts natural language queries into SQL commands using OpenAI's LLM.
- Designed modular APIs to process user input, generate optimized SQL queries, and retrieve relevant database results dynamically.
- Implemented prompt engineering and context management to ensure accurate query generation and result interpretation.
