PROJECT

Turf Playground Booking System (Mini Project)

- Frontend : Java
- Backend : MYSQL

This Turf Playground Booking Website allows users to easily book turf grounds for sports like football, cricket, tennis, and more. Designed with three modules – Admin, Manager, and User – it simplifies the booking process, avoids slot clashes, and ensures efficient management for schools, clubs, and individuals.

Deep neural network algorithm based object detection & distance estimation for autonomous vehicles

- Frontend : HTML, CSS, Java script , Flask python
- Backend : Django

This project uses deep neural networks to detect objects and estimate distances in real-time for autonomous vehicles. It processes video feeds with high accuracy, enhancing safety and decision-making in applications like robotics, surveillance, and self-driving systems.
