Professional Summary

Results-driven Senior Backend Developer with 3+ years of experience building scalable backend systems using Django, Django REST Framework, Flask, and AWS. Expert in API design, third-party integrations, workflow automation, and performance optimization across fintech, manufacturing, and SaaS. Strong background in cloud-native architectures, async processing, and observability, with experience mentoring junior developers and delivering production-ready solutions through cross-functional collaboration.

Experience

LendAPI (Contract | US-based Fintech) **Irvine, California, United States**

Django Developer *Sep 2025 – Jan 2026*

- Contributed to a short-term US offshore fintech contract, enhancinging a Django-based platform for digital loan applications, automated approval/decline, and contract generation by designing a scalable provider architecture and integrating multiple third-party financial and verification providers, enabling management of credentials, configurations, activation status, and support JSON/XML responses with client-configurable activation.
- Implemented secure provider response handling, storing raw API responses in AWS S3 and persisting normalized decision-critical fields for seamless integration into the loan decisioning flow.

Wyntok Technologies (Manufapp) **Sainik Farms, New Delhi**

Senior Backend Developer *Apr 2025 – Sep 2025*

- Guided junior developers in Django best practices, debugging techniques, and AWS integrations, while overseeing API design decisions and conducting code reviews to ensure performance, scalability, and maintainability.
- Coordinated with product managers and mobile developers to align backend workflows with evolving business needs.

Django Developer *Nov 2023 – Apr 2025*

- Led backend API development to transition from a desktop-only system to a mobile-compatible platform, enabling real-time tracking of orders and production, improving bottleneck visibility and stalled order analysis.
- Developed an advanced scheduling algorithm optimizing work orders with constraints like machine availability, production times, ongoing jobs, downtimes, and resource utilization, ensuring efficient and accurate production planning.
- Automated order entry via email using Amazon SES, S3, and AWS Lambda by configuring SES Rule Sets, extracting order details with a Lambda function, and triggering backend workflows, reducing manual input and errors.
- Improved backend observability and performance by implementing a Django Logger, optimizing database queries, and developing an AWS Lambda function for automated log analysis with daily performance insights via email.

Nagarro **Ghaziabad, Uttar Pradesh**

Associate Engineer *Oct 2022 – Nov 2023*

- Developed and maintained a comprehensive learning portal using Django Rest Framework and PostgreSQL, enabling teachers to manage courses and chapters while allowing students to enroll, with ongoing API optimization and maintenance for an enhanced educational experience.
- Developed an Employee Management web app using Flask and SQLite, enabling secure employee login, personal detail management, and an admin panel for employee deletion and detailed access.

Projects

Manufapp Live Production Tracker | *Tkinter, AWS (S3, Lambda), Django REST API* **Nov 2023 – Jan 2024**

- Developed a Tkinter-based desktop app for real-time production tracking via barcode scanning and automated CSV data logging to Amazon S3, with an AWS Lambda function processing the files to update the Django API, reducing manual entry and improving manufacturing workflow accuracy.

Independent Projects

Tool Shed Rental | *Django Rest Framework, React, PostgreSQL* **Jun 2024 – Sep 2024**

- Developed a rental service management system with React and Django REST Framework, including customer profiles, dynamic pricing, product categories, flexible reservations, maintenance tracking, and automated invoicing.

JunoBoard | *React, Firestore, AWS S3* **Apr 2024 – Jun 2024**

- Developed a Client Services Management App using React and Firestore, utilizing Context API for efficient state management, and deployed it as a static site on AWS S3 with GitHub Actions for automated CI/CD.

Education

Bachelor of Technology (Information Technology) – 71.2% **2018 – 2022**
ABES Engineering College *Ghaziabad, Uttar Pradesh*

Technical Skills

Programming Languages: Python, JavaScript, HTML5, CSS, C, C++
Web Frameworks & Backend: Django, Django Rest Framework (DRF), Flask
Frontend & UI: React, Bootstrap, Tkinter
Databases: PostgreSQL, MySQL, MongoDB, Firestore, SQLite
Cloud & Devops: AWS (S3, Lambda, SES), Github, GitHub Actions, CI/CD
Caching & Async: Redis, RabbitMQ, Celery, Celery Beat
Tools & Collaboration: VS Code, Cursor, Jira, Confluence
Data Analysis & Visualization: Pandas, Matplotlib, Seaborn, Power BI
