Kerala , India

PROFILE SUMMARY

Full Stack Engineer specializing in microservices architecture, event-driven systems, and real-time platforms using Django, Django REST Framework, RabbitMQ, WebSockets, PostgreSQL, and React.Experienced in building secure, AI-enhanced, geospatial and payment-enabled applications with JWT/OAuth authentication and large-scale third-party API integrations.

TECHNICAL SKILLS

Languages:	Python, JavaScript, C
Backend:	Django, Django REST Framework, Django Channels, JWT, Microservices , SQL
Frontend:	React, Redux, Tailwind CSS, Axios, HTML, CSS
Databases:	PostgreSQL, SQLite, Redis, Django ORM ,Database Optimization, System Architecture
AI/NLP:	TextBlob, HuggingFace Transformers, Pipeline
Real-Time :	WebSockets, Live Chat, Notifications, Journey Tracking
DevOps & Tools:	Docker, AWS, Git, Celery, RabbitMQ, Nginx, Postman, Swagger, Netlify
APIs :	Google Maps, Razorpay, UPI, OpenWeatherMap, OAuth
Concepts :	OOP, Asynchronous Programming, Distributed Systems, Database Transaction, Management (ACID), Agile Methodology

EXPERIENCE

React & Python Developer, **Bridgeon Solutions LLP**, Malappuram 2025 – Present

• **Designed a full-stack travel social platform** using React and Django/DRF with a 5-service Microservices Architecture powered by RabbitMQ, improving scalability and reducing system complexity.

• **Engineered a real-time system** using WebSockets and Django Channels to support live GPS tracking, group chat, and notifications.

• **Utilized** 5+ third-party APIs (Google Maps, Razorpay, OpenWeatherMap, TextBlob, HuggingFace) and incorporated features for AI-powered sentiment analysis, secure payments, and intelligent trip planning.

• **Provisioned** apps on **AWS** EC2 with React on Netlify, optimized PostgreSQL queries using strategic prefetching, ensuring 40% faster API response times and 99% system reliability.

PROJECTS

Travel Expense & Experience with Social Media.

Architected TravelSync, a comprehensive travel platform featuring AI-driven insights, real-time collaboration, and AI-assisted route planning. Designed a scalable 5-service microservices architecture serving 1,000+ users with 50+ API endpoints. Implemented event-driven communication, secure payments, and geographical optimization.

- **Established** RabbitMQ RPC for microservices communication between 5 independent services (auth, profile, social, experience, expense).
- **Leveraged** Django Channels & WebSockets for real-time group chat, GPS tracking, and notifications to 500+ concurrent users.
- **Initiated AI analytics with HuggingFace Transformers & TextBlob** for sentiment analysis and summarization of 5,000+ experiences.
- **Created secure payment** flows with Razorpay & UPI including dynamic QR generation and OTP verification.

- **Launched** trip planning with Google Maps APIs using geographical algorithms for route optimization.
- **Boosted backend performance** by 60% through advanced Django ORM techniques and strategic caching.

Technologies Used: Python, Django, Django REST Framework, PostgreSQL, RabbitMQ, WebSocket, Django Channels, JWT Authentication, Google OAuth, HuggingFace Transformers, TextBlob, Google Maps APIs, Razorpay, UPI, Redis, Docker, Celery, Microservices Architecture.

E-Commerce Recipe Platform.

planned and developed RecipeCart, a full-stack e-commerce platform for managing recipes and digital products, serving 1,000+ monthly visitors with seamless browsing, cart management, and user engagement. Structured for scalability and security using Django and React.

- **Established core shopping functionality** with JWT authentication, implementing cart, wishlist, and order management handling 5,000+ monthly interactions with optimized Django ORM.
- **Integrated Razorpay payment gateway** for secure transaction processing with real-time verification, and created an admin panel reducing management efforts by 40%.
- **Constructed REST APIs using** Django REST Framework and a responsive React frontend with state management, achieving 10K+ monthly UI interactions.
- **Deployed on AWS** EC2 with Nginx and Gunicorn, ensuring 99% uptime with PostgreSQL database for reliable performance.

Technologies Used: Python, Django, Django REST Framework, JWT, React, Axios, React Hooks, PostgreSQL, Razorpay, AWS EC2, Nginx, Gunicorn, REST APIs, ORM Optimization.

EDUCATION

Bachelor of Arts (B.A.) – Calicut University	2023-Present
Higher Secondary Education (+2) – Computer Commerce	2021 – 2023
