Profile Summary

- **Full Stack Web Development:** Hands-on experience in building responsive web applications using HTML, CSS, JavaScript, jQuery, Bootstrap, and React, with a focus on clean UI and user experience.
- **Backend Expertise**: Proficient in developing robust backend systems using Django, with MySQL integration for efficient data handling and dynamic content generation.

Relevant Coursework

- CSS
- OOP Concepts
- Bootstrap
- HTML
- DBMS
- Front-End programming
- Python
- JavaScript
- Back-End programming

Technical Skills

Languages: Python, SQL, JavaScript

Technologies/Frameworks: HTML5, CSS, Django,, Bootstrap

Databases: MySQL, SQLite, MongoDB

Developer Tools: VS Code, Figma, Git, Canva, Pycharm

Project

- **Face Id Based Attendence System**

- Purpose: To create a real-time face recognition system that identifies individuals from a live webcam feed and automatically logs their entry and exit times into an Excel spreadsheet.
- Users:
  - Operator: The individual who runs the script and manages the database of known faces.
  - Recognized Individuals: People whose images are stored in the system for identification.
- Features:
  - Real-Time Recognition: Detects and identifies faces directly from a live webcam stream.
  - Dynamic Face Enrollment: New individuals can be added simply by placing their image file (.jpg, .png) into a designated "faces" folder.
  - Visual Identification: Draws colored bounding boxes around faces in the video feed—green for recognized individuals and red for "Unknown" persons.
  - Automated Attendance Logging: Captures and records the first time a person is seen ('Entered Time') and the last time they are seen ('Exited Time').
  - Persistent Data Storage: Appends the log of recognized individuals and their timestamps to

an Excel file for permanent record-keeping.
    - Optimized Performance: Resizes video frames during processing to ensure smooth and faster recognition.
    - CLI-Based Operation: The entire application is controlled and run from the command line.
- Technology used: Python, OpenCV, face_recognition, Pandas, NumPy, Openpyxl.

Education

Python Full Stack Development (Ongoing) 2025
SMEC Technologies, Kaloor, Kochi

Bachelor of Computer Science 2022-2025
Ettumanoorappan College
