Professional Summary

Full Stack Engineer with 3 years of experience designing and scaling production-grade web applications using ReactJS and Python (Django). Proven expertise in architecting RESTful microservices, optimizing high-traffic APIs, and deploying cloud-native systems on AWS. Strong background in SQL/NoSQL data modeling, performance tuning, and secure system design. Experienced in Docker-based CI/CD workflows and delivering scalable, maintainable solutions in fast-paced product environments.

Technical Skills

Languages	Python, JavaScript, Ruby
Frontend	React.js, HTML, CSS
Backend	Django, Ruby on Rails, RESTful APIs, Microservices
Databases	PostgreSQL, MySQL
Cloud Platforms	AWS (EC2, S3, IAM, RDS, Lambda)
DevOps & Tools	Docker, CI/CD Pipelines, Git, Linux
Core & Concepts	Microservices, Serverless Computing, Performance Optimization, Secure Application Design, Data Modeling, DSA

Soft Skills

Strong problem-solving skills, Analytical mindset, Quick learner, Team collaboration, Self-motivated.

Experience

Technical Associate – Full Stack Engineer **Jan 2023 – Sep 2025**
Ned Technology Private Limited, Chennai

- Designed, developed, and maintained scalable full-stack web applications using **ReactJS** and **Python (Django)** in a microservices-based architecture.
- Built and optimized high-performance **RESTful APIs** supporting internal and third-party integrations.
- Improved system performance by **45%** through database query optimization, indexing , caching (Redis), and backend refactoring.
- Worked extensively with **PostgreSQL and MySQL**, implementing efficient schema design and data modeling practices.
- Deployed and managed applications on **AWS (EC2, S3, RDS, IAM, Lambda)**, ensuring scalability, reliability, and cost efficiency.
- Implemented Docker-based containerization and automated **CI/CD pipelines** to streamline deployments.

- Ensured application security through authentication, role-based access control, and secure API design.
- Collaborated with cross-functional teams (Product, QA, DevOps) in Agile environments to ship production-ready features.
- Troubleshot and upgraded legacy systems, improving maintainability and reducing technical debt.

Projects

Qadex Supply Chain Mapping Platform – QADEX Group, UK
Role: Full Stack Engineer

- Built responsive front-end interfaces and dynamic components using **ReactJS**.
- Developed scalable backend services and structured JSON APIs using Python and Rails.
- Implemented supplier data visualization and real-time data interactions.
- Contributed to architecture discussions, feature delivery, and production issue resolution.

Piota Customer Portal

- Developed a secure customer portal with authentication, role-based access control, and API integrations.
- Designed backend workflows for customer lifecycle management and automated operational processes.
- Optimized database queries and enhanced performance for concurrent user access.

Education

B.Sc. Computer Science **2022**
Guru Nanak College, Chennai
