Projects

Machine Learning Techniques Applied to Detect Cyber Attacks On Web Applications
Technology used: Python
Cloud service providers need to manage countless tasks and clients. The arrival rate of jobs varies rapidly, making load balancing even more challenging. The proposed calculation shows improved outcome in the two scenarios of differing data centers and number of jobs

Email Authentication
Technology used: Python
Developed a backend application in Python for secure email-based OTP verification. This system generates a random OTP using the random module and sends it to a user-provided email address, ensuring secure user authentication.

Website of Organic Store
Technology used : HTML, CSS, Bootstrap, JavaScript
Developed a responsive website for Food Store where users can see a list of food items, detailed information about a food Item, offers.

MyFoodCart – React Food Shopping App
Technology used : HTML, CSS, JavaScript, React
A responsive food ordering web application built with React.js that allows users to meals, add them to a cart, and place orders seamlessly. It features dynamic UI components, state management, and a smooth user experience.

NoteBook Application : Front-End and Back-End API Integration
Technology Used: Front-end,Python,MySql,Flask
Used Flask as a bridge between the front-end and back-end to collect,process,and store data in a MySQL database

Certificates

- Hackerrank Certification in Python
- Full Stack Web Development at Ava Intern
- Python Full Stack Trainee at Codegnan IT Solutions

Strengths

Ability to work in a team and able to lead a team.

Maintaining good relationships with others.

Adaptable to new technologies.

Quick Learning and good problem solving skills

Interests

- Travelling
- Learning new things
- Reading books

Declaration

I hereby declare that all the above mentioned information is true and genuine to be the best of my knowledge and belief
