Ayat Wais

Software Development Engineer – Frontend | AI | Automation

ayatwais@gmail.com | +963 936030281 | icpc | LinkedIn

ABOUT ME

Web Developer and Analyst with 3 years of experience specializing in technology solutions. Recently contributed to the development of an Islamic banking system, implementing Sharia-compliant financial modules. Leveraged analytical insights to enhance user experience, resulting in 20% improved customer satisfaction.
Additionally skilled in Robotic Process Automation (RPA) to streamline workflows and enhance operational efficiency, and proficient in Prompt Engineering to optimize AI-driven solutions and improve system intelligence.

SKILLs

• **Programming Languages**: Javascript | Typescript | C++ | Java | Python
• **Artificial Intelligence**: Scikit-learn | TensorFlow | PyTorch | Keras | Pandas | NumPy | Jupyter
• **Front End:** HTML | CSS | React | Angular| Bootstrap | Tailwind | Next
• **Others**: Swagger | Postman | Jira | Git | GitLab | GitHub | Problem Solving
•**Automation & RPA:** UiPath, Robocorp (Python), Email Invoice Extraction Bots
•**AI & Prompt Engineering:** Prompt Engineering for AI models,Designing structured prompts for automation and data extraction,Integrating AI-driven features into web applications

EXPERIENCE

Spark Village | 2023
Frontend Development & Engineering:
•Developed and optimized core UI components using Angular, TypeScript, RxJS, and Angular Material, improving responsiveness and user flow.
•Enhanced volunteer–NPO matching efficiency by refining filtering logic, reducing search time by 25%.
•Integrated REST APIs and improved data handling performance, resulting in smoother navigation and fewer UI delays.
•Collaborated with designers and backend teams to deliver a scalable global volunteering platform used by international organizations.
•Implemented reusable components and clean architecture practices, reducing development time for new features by 30%

HojoKinKensaku | 2024 – 2025
Frontend Development & Engineering:
•Built interactive dashboards and advanced data visualizations using Chart.js and Angular, improving insights for companies and specialists.
•Improved grant search accuracy and speed by optimizing API integration and implementing efficient filtering mechanisms.
•Designed modular UI components, increasing maintainability and reducing UI bugs by 20%.
•Enhanced admin panel workflows, enabling faster content moderation and user management.
•Improved overall user experience through responsive layouts and accessibility-focused design.

Eifinn Financial System (Islamic Banking) | 2025 – 2026
Software Developer & Analyst:
•Contributed to the development of a Sharia-compliant financial system covering loans, savings, accounting, and reporting.
•Analyzed financial workflows and translated them into functional modules, improving operational accuracy and reducing manual work.
•Enhanced user experience through data-driven insights, contributing to a 20% increase in customer satisfaction.
•Collaborated with backend and product teams to ensure compliance with Islamic finance rules and cooperative society requirements.
•Supported automation initiatives using RPA methodologies to streamline repetitive financial processes.

RPA Invoice Extraction Bot | 2025 – 2026
Automation Developer:
•Built an automated bot to extract invoices from email inboxes using UiPath and Robocorp (Python).
•Implemented end-to-end automation including email parsing, PDF data extraction, and structured output generation.
•Eliminated repetitive manual processing by designing a robust RPA workflow, improving operational efficiency and reducing human error.
•Demonstrated strong automation logic and integration capabilities across multiple tools and data sources.

EDUCATION

Computer Science, University of Aleppo
2019 – 2024 | Aleppo, Syria
• Known as Informatics Engineering locally, currently pursuing Computer Science
• Actively engaged in ICPC problem-solving challenges, honing coding skills
