SUMMARY

"To leverage my skills in Python, data analysis, and software development to build innovative and impactful solutions, with a focus on real-time systems and data-driven decision-making, while continuously enhancing my technical expertise and contributing to organizational success."

EDUCATION

Bhagat Phool Singh Mahila Vishwavidyalaya University(Sonipat,Haryana)||B.Tech CSE Dec 2021 – Jun 2025
CGPA:- 7.46

Tagore Baal Niketan Sr. Sec. School(Karnal,Haryana) Apr 2020– June 2021
CBSE Board with 77.4% in Senior Secondary (12th)

Tagore Baal Niketan Sr. Sec. School(Karnal,Haryana) Apr 2018– May 2019
CBSE Board with 71.4% in Senior Secondary (10th)

INTERNSHIPS

Data Analytics Intern || IBM SkillsBuild (CSRBOX) June 2024 - Aug 2024

- Completed a 6-week virtual internship focused on data analytics fundamentals and tools.
- Gained hands-on experience with Excel, SQL, Python, and Power BI for data cleaning, visualization, and insights.
- Worked on real-world case studies to apply data-driven decision-making techniques.

SKILLS

PROGRAMMING LANGUAGES:- Python, SQL
LIBRARIES:- Numpy,Pandas,Matplotlib,Seaborn

TECHNICAL SKILLS:- Data Structure, Computer Networking, OOPs, Operating System, SQL

TOOLS KNOWLEDGE:- MySql, VsCode,Powerbi
AREA OF INTEREST:- Problem Solving

PROJECTS

Driver Drowsiness Detection System June 2024 - July. 2024

Description: This Project aims to detect driver drowsiness in real time using computer vision techniques. It helps prevent road accidents by monitoring the driver's eye movements and alerting them if signs of fatigue are detected.
Tools & Technologies Used:
Python: For Writing the core logic and implementing algorithms.
OpenCV: For video Capturing and image processing.
d-lib: For facial landmark detection.
Pygame: For generating alert sounds.
Roles and Responsibility:
Collected and preprocessed image data for model training. Developed and implemented a real-time drowsiness detection model. Used OpenCV to detect facial landmarks and eye movements . Integrated an alert system to notify drowsy drivers.

Multi Color Detection Sept 2024 - Oct 2024

Description: Developed a Python-based application to detect and highlight multiple colors in images and real-time video streams using OpenCV. The project involved identifying predefined HSV color ranges to segment and visualize different colors effectively, enabling real-time color-based analysis and processing.

Tools & Technologies used:

Programming Language: Python

Library: OpenCV

Roles and responsibility: Developed a Python-based application using OpenCV to detect multiple colors in real-time. Preprocessed image data using techniques like color space conversion and thresholding. Configured color range thresholds (HSV values) to accurately identify specific colors. Implemented contour detection to highlight and label detected colors in the input feed. Tested and debugged the system to ensure robustness and accuracy in diverse lighting conditions. Documented the workflow and outcomes for future reference and scalability.

ACHIEVEMENTS

Secured 1st position in a Hackathon at QSpiders, Competing among 10 teams across 7 technical rounds including SQL,Web Technology Java, Python , Manual & Automation Testing.

TRAINING

Qspiders Gurugram

Currently pursuing training in Python Full Stack with Data Analytics at QSpiders Gurugram, focusing on front-end, back-end development, database management, and real-world project implementation.

INTERESTS

Cooking: Passionate about exploring diverse cuisines and experimenting with new recipes.

Traveling: Enthusiastic about discovering new cultures and broadening perspectives.

Photography: Enjoy capturing moments and landscapes, focusing on detail and composition.

DECLARATION

I hereby declare that the information provided above is true and correct to the best of my knowledge and belief
