Professional Summary

Results-driven Software Test Engineer with 4 years of experience in test automation and quality assurance. Expertise in building scalable automation frameworks using Playwright, Selenium, and Karate. Proficient in end-to-end testing strategies, CI/CD integration, and API automation. Strong foundation in Java, SQL, and version control systems with proven ability to improve software quality and reduce testing cycles.

Technical Skills

Programming Languages: Java, Python,C-Sharp, JavaScript, SQL, HTML/CSS
Test Automation Tools: Playwright, Selenium WebDriver, TestFlow, Jmeter , Karate Framework, TestNG, JUnit
API Testing: REST API, Postman, Karate DSL, API Automation
Build & CI/CD Tools: Maven, Jenkins, Git, GitHub, CI/CD Pipelines
Databases: MySQL, SQL Server, Database Testing
Testing Types: Functional Testing, Regression Testing, Integration Testing, Smoke Testing, API Testing
Methodologies: Agile, Scrum, Test-Driven Development (TDD)
Tools & Technologies: JIRA, TestRail, Selenium Grid, Page Object Model (POM), Data-Driven Testing

Professional Experience

Software Associate 2022 – Present
Lentra *Pune, Maharashtra, India*

- Architected and implemented comprehensive test automation framework using Playwright and Selenium, achieving 80% test automation coverage and reducing manual testing efforts by 60%
- Developed and maintained 500+ automated test scripts for web applications using Java, Playwright, and Selenium WebDriver with Page Object Model design pattern
- Led API automation initiatives using Karate Framework, creating robust test suites for REST APIs that validated 100+ endpoints, ensuring data integrity and system reliability
- Integrated automated test suites with Jenkins CI/CD pipelines, enabling continuous testing and reducing deployment time by 40% through early defect detection
- Collaborated with cross-functional teams in Agile environment to define test strategies, review requirements, and ensure quality standards across multiple product releases
- Performed comprehensive database testing using SQL queries to validate data accuracy, integrity, and backend functionality across complex financial applications
- Mentored junior QA engineers on automation best practices, code reviews, and framework optimization, improving team productivity by 25%
- Implemented data-driven testing approach using Maven for dependency management, resulting in maintainable and scalable test automation solutions
- Executed regression, smoke, and integration testing across multiple environments, identifying critical defects and improving software quality metrics by 35%

Key Projects & Achievements

End-to-End Test Automation Framework
Playwright — Selenium — Java — Python

- Built enterprise-level automation framework with modular architecture, supporting parallel execution and cross-browser testing
- Reduced test execution time by 70% through optimized test design and parallel processing capabilities

API Automation Suite
Karate Framework — REST API — Maven

- Designed comprehensive API test automation suite with 200+ test scenarios covering positive, negative, and edge cases
- Achieved 95% API coverage with automated validation of response schemas, status codes, and business logic

Education

Sant Gadge Baba Amravati University Amravati, India
Bachelor of Engineering in Electronics & Communication Engineering *July 2017 – July 2021*
