Farooq Basheer

SENIOR SOFTWARE ENGINEER

Trivandrum, Kerala | +91 8891868619 | farooqbasheer000@gmail.com

Objective

Software engineer with a strong foundation in the JavaScript ecosystem and backend technologies. It brings 4 years of experience in building applications with React.JS, HTML and CSS, alongside 3 years of experience in backend development with Python and Flask. Adept at Agile workflows, advanced state management and ensuring application stability through comprehensive testing suites. I am committed to writing clean, maintainable code.

Experience

Senior Software Engineer | Quest Global **October 2025 - Present**

- **AIPF (React JS, Python)** – Application which is used to do inference operation.

  Converting existing application into responsive Web Application(earlier supports only 1920 * 1080 resolution)

  Dynamic form implementation for training parameter inputs.
- **MAXEM (Angular)** – Application which is using to measure length, angle, pitch and roughness

  Implementation of Roughness calculation.

  Converting existing lists to reusable table components.

  Sorting implementation.

Software Engineer | Quest Global **June 2023 – September 2025**

- **AIPF (React JS, Python)** – Application which is used to do inference operation.

  WebSocket implementation to receive live status and to upload datasets and inference images. Done both in React (Socket.io) and Python end (Flask Socket.io).

  Box – plot selection on images to do inference operations.

  User Management System implementation.

  Share Management System implementation.
- **ADC (React JS, Python)** – Application used to classify defects of wafer.

  Bug Fixes and Final project release support.

Trainee Engineer | Quest Global **June 2022 – June 2023**

- **VWT (React JS)** – Application which is used to do visualize defects on a wafer.

  Develop infinite scroll table which can hold 2 lakhs records in 2 sec using React Base Table, Row selection, Sorting and Filtering data.

  Display wafer data using pictorial representation using Pixi.js, Selection of chips, Undo and Redo Operation, Deselection etc., has been implemented.

Display wafer test results in graphical representation using Plotly.js and also implemented selection, deselection by bar click etc.

Implemented CI/CD pipeline using GIT

Skills & abilities

- **Programming Languages**: JavaScript, HTML5, CSS3, Python, TypeScript
- **Front-End Frameworks & Libraries**: React JS, Next.JS, React Native (Familiar), Angular (Familiar), Redux, MobX
- **Testing Frameworks & Tools**: React Testing Library, Jest
- **UI Frameworks & Libraries**: Material UI, Bootstrap, PIXI.js, Plotly.js, React Base Table
- **Back-End Development**: Python, Flask, Socket.io
- **Databases**: MySQL
- **Version Control & CI/CD**: Git, GitLab CI/CD
- **Additional Activities**: Bug fixing, QA support, Code review participation

Education

Bachelor of Technology | 7.64 GPA **2016 - 2020**

Mechanical Engineering

Achievements

- **On The Fly Award –** April 2023 and received **High Impact (HI)** grade for annual performance rating
- **On The Fly Award –** Received twice, on March 2024 and December 2024, received **Exceptional Impact (EI)** grade for annual performance. Nominated for "**Star Performer of Year" Delivery 2024**
- Received **Exceptional Impact (EI)** grade for annual performance 2025.
