GANESHA R S

Software Developer | Python | Full Stack | REST APIs | SQL | Cloud

8015683911 | rsganesha71@gmail.com | Chennai, Tamil Nadu

PROFESSIONAL SUMMARY

Software Developer with 6 months of professional experience building backend systems and API integrations at Nayagara Technologies, Bengaluru. Proficient in Python, SQL, REST API development, and cloud deployments. Hands-on experience with full stack development including backend services, database design, API-driven frontends, and end-to-end application delivery. Built and deployed multiple projects involving real-time data processing, CRUD applications, and interactive dashboards. B.Tech in IT (CGPA 8.5/10) with Oracle Cloud AI and Salesforce certifications. Seeking SDE / Python Developer / Full Stack Developer roles.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, HTML, CSS

Backend & Frameworks: Flask, FastAPI, REST APIs, Django (foundational), Node.js (foundational)

Frontend: HTML5, CSS3, JavaScript (ES6+), Bootstrap, React (foundational)

Databases: MySQL, PostgreSQL, SQLite, Database Design, ORM (SQLAlchemy)

Cloud & DevOps: AWS EC2, Oracle Cloud Infrastructure, Git, GitHub, CI/CD basics, Linux

Libraries & Tools: Pandas, NumPy, Requests, Jinja2, Postman, Jupyter Notebook, VS Code

Concepts: OOP, Data Structures & Algorithms, MVC Architecture, Agile/Scrum, SDLC, API Design, Unit Testing

PROFESSIONAL EXPERIENCE

Software Developer Intern — Nayagara Technologies, Bengaluru *Jun 2025 – Nov 2025*

- Developed and maintained backend modules in Python for application data processing, writing reusable functions and service layers that handled 10,000+ records per processing cycle
- Built and consumed RESTful APIs for automated data exchange between frontend clients and backend services, implementing request validation, error handling, and JSON response formatting
- Designed and optimized SQL queries across 5+ relational database tables using complex JOINs, subqueries, and indexed lookups, reducing average query execution time by 30%
- Wrote unit tests and integration tests for backend modules, achieving 80%+ code coverage and catching regression issues before production deployments
- Participated in full Agile/Scrum lifecycle — daily standups, sprint planning, code reviews via GitHub PRs, and retrospectives in a team of 6 developers
- Debugged and resolved production issues by analyzing application logs, tracing API call chains, and implementing fixes with zero-downtime deployments

PROJECTS

Full Stack Sales Intelligence Platform

Python (Flask/FastAPI), MySQL, HTML/CSS/JavaScript, Bootstrap, Power BI, Pandas

- Architected and built an end-to-end full stack web application for sales data analytics — Python backend serving REST APIs, MySQL database layer, and a responsive frontend dashboard with interactive charts and filters
- Developed 12+ RESTful API endpoints using Flask/FastAPI for CRUD operations on sales records, with input validation using Pydantic schemas, structured error responses, and pagination support for 50,000+ records
- Designed a normalized MySQL database schema (3NF) with 6 tables covering products (200+ SKUs), regions, time-series data, and revenue streams — wrote migration scripts and seeded test data programmatically
- Built a Python ETL pipeline using Pandas to ingest raw CSV/Excel data, clean 12% missing values via imputation strategies, deduplicate 3,200+ records, and load transformed data into MySQL via SQLAlchemy ORM
- Implemented frontend dashboard using HTML5, CSS3, JavaScript, and Bootstrap with dynamic chart rendering (Chart.js) — featuring drill-down filters by region, product category, and date range

- Integrated Power BI embedded reports with DAX measures for YoY growth waterfall charts and regional heat maps, enabling non-technical stakeholders to self-serve analytics
- Deployed on AWS EC2 with Nginx reverse proxy, configured environment variables for secure database credentials, and set up basic CI/CD with GitHub Actions for automated testing on push

Customer Support Ticket Management System

Python (Flask), MySQL, HTML/CSS/JavaScript, REST APIs, Pandas

- Built a full stack CRUD application for managing customer support tickets — RESTful backend in Flask with Jinja2-templated frontend, handling ticket creation, assignment, status tracking, and resolution workflows
- Designed a relational database schema with 4 tables (tickets, agents, categories, audit_log) supporting foreign key relationships, cascade deletes, and indexed columns for fast lookups on 20,000+ records
- Implemented role-based access control (RBAC) with session-based authentication — admin, agent, and viewer roles with route-level permission checks using Flask decorators
- Built an analytics module using Pandas and Matplotlib that generated automated reports — discovered 40% of high-priority escalations concentrated in 2 categories with 3.2x longer resolution times than median
- Wrote 25+ unit tests using pytest covering API endpoints, database operations, and edge cases — integrated with GitHub Actions for automated test execution on every pull request
- Proposed 3 data-driven recommendations including dedicated escalation queues, projected to reduce high-priority resolution time by 25%

Real-Time IoT Location Tracking Service

Python, Flask, GPS Module (NEO-6M), REST APIs, JSON, Cloud APIs, WebSockets

- Developed a Python backend service that ingested real-time GPS data from NEO-6M sensor modules at 1-second intervals, parsed NMEA sentence protocols, and exposed location data via REST API endpoints
- Implemented data validation middleware to filter GPS noise — discarded readings with HDOP > 2.0 and applied moving-average smoothing over 5-point windows, achieving 95%+ positional accuracy
- Built a lightweight web frontend with JavaScript and Leaflet.js map library to visualize live device locations with auto-refreshing markers and historical path tracing
- Designed fault-tolerant retry mechanisms with exponential backoff for intermittent connectivity scenarios, ensuring zero data loss during network interruptions

EDUCATION

B.Tech — Information Technology *2021 – 2025*

Paavai Engineering College, Namakkal | CGPA: 8.5 / 10

HSC: 82% | SSLC: 80%

CERTIFICATIONS

- Oracle Cloud Infrastructure — AI Foundations Associate
- SQL (Basic) Skill Certification — HackerRank
- Salesforce Certified — Agentforce Specialist
- Cybersecurity Job Simulation — Deloitte (Forage)

LANGUAGES

English, Tamil
