Portfolio

Aspiring Junior Python Developer with strengths in full stack development. Experienced in backend technologies like Python, Django as well as frontend frameworks such as React in my college Project. Through projects in web applications, automation, and visualization, I have gained hands-on experience in building responsive and scalable solutions. I am eager to apply my Python skills while continuing to grow in full stack roles.

EDUCATION

Tagore Government Arts and Science College, Lawspet, Puducherry, Puducherry, India | Bsc — Jul '20 – Jun '23
Computer Science
GPA: 6.02

Kanchi Mamunivar Government Institute for Post graduate Studies and Research, Lawspet, Puducherry, Puducherry, India | Msc — Aug '23 – May '25
Computer Science
GPA: 7.19

Certifications

Python Full Stack | Wisdom Praise Infotech | 6 Month

FINAL YEAR PROJECT

AI - Powered Price Comparison Website
S. Mohan Dass

- In today's digital economy, consumers often struggle to find the best deals for products across various e-commerce platforms. Manual comparison is time-consuming and inefficient. This project presents an AI-Powered Price Comparison Website designed to automate and optimize the price comparison process using modern web technologies.
- The system features a React.js-based frontend that provides users with an intuitive and responsive interface to search for products, view detailed price comparisons, and receive smart recommendations. The backend is developed using Node.js, which handles API integration, data processing, and communication with the database. MongoDB, a NoSQL database, is used to store product information, user searches, and historical price data efficiently.

Skills

Programming Languages:
Frontend Framework: HTML, CSS, JavaScript, Bootstrap
Backend Framework: Python, Django
Database: SQL
Vision Control and Tools: Git, GitHub, Vscode
Office Tools: Microsoft Word, Excel, PowerPoint
Languages: Tamil, English
