TECHNICAL SKILLS

- React.js
- JavaScript
- TypeScript
- Vue.js
- Angular
- Redux Toolkit
- HTML5 & CSS3
- Material-UI
- Vuex
- Bootstrap
- Git & GitHub
- REST APIs
- Cypress
- Jest
- React Testing Library
- Agile/Scrum

PROFESSIONAL EXPERIENCE

Swotminds (Client: PayPal) — Dec 2025 - Present (Bangalore)

Senior Software Engineer

- Built reusable and modular UI components using React and TypeScript for agent model configuration in the **Cosmos AI project**.
- Integrated front-end components with backend and AI service **REST APIs** with robust error handling.
- Implemented end-to-end testing using **Cypress**.
- Collaborated with cross-functional teams following Agile development practices.
- Ensured **WCAG 2.1 AA accessibility compliance** through semantic HTML, ARIA attributes, and keyboard navigation

Infobell IT Solutions Pvt Ltd — Jan 2023 - Dec 2025 (Bangalore)

Cloud Cost Advisor (AMD) - Software Engineer — **Sep 2024 - Dec 2025**

- Architected and deployed enterprise-grade **SaaS application** using **React** with **hooks and functional components** in an **Agile/Scrum environment**, implementing **Material-UI** for consistent UI/UX across multiple device form factors
- Designed comprehensive **state management architecture** leveraging **Redux Toolkit** with slices and selectors, resulting **performance boost** and enhanced user session management
- Delivered measurable **2% reduction in initial bundle size** through strategic code splitting using lazy loading and progressive loading patterns with Suspense
- Spearheaded comprehensive performance audits using **Lighthouse**, pinpointing critical rendering bottlenecks in data-heavy components, and mitigating major bottlenecks during regression testing
- Enhanced application reliability through implementation of error boundaries, retry mechanisms, and graceful degradation strategies using React's **Error Boundaries and custom hooks.**
- Implemented comprehensive unit testing using Jest and React Testing Library, establishing testing standards and achieving 80%+ code coverage across critical application features.

ERP Application - Junior Software Engineer — **Oct 2023 – Aug 2024**

- Drove **end-to-end feature development** from business requirement analysis to production deployment, coordinating with cross-functional teams including UX/UI designers and backend architects.
- Optimized React application performance through implementation of **React.memo, useMemo, and useCallback hooks**, achieving **3% faster rendering cycles**.
- Spearheaded the design and implementation of a comprehensive **RBAC** system incorporating Material-UI improving application security and reducing unauthorized access attempts
- Optimized application build pipeline using **vite** with custom configurations, and implementing tree shaking to reduce the bundle size
- Built scalable **component library** using Material-UI's theming system, ensuring design consistency and developer productivity across multiple development teams.
- Developed accessible form components following WCAG guidelines with proper focus management and error messaging for enhanced user experience

Buzzstaff Women - Trainee Engineer **Jan 2023 - Sep 2023**

- Led migration initiative from legacy JavaScript to **React ecosystem**, implementing **Context API with useReducer** for predictable state management and improved application architecture.
- Implemented comprehensive **cross-platform compatibility** strategy using PostCSS autoprefixer, custom polyfills, and progressive enhancement techniques for seamless multi-browser support
- Executed systematic **frontend performance optimization** through image optimization, critical CSS inlining, and CDN integration, achieving **4% improvement in Core Web Vitals scores**.
- Developed mobile-first **responsive design system** using CSS Grid and Flexbox, ensuring optimal user experience across tablet and mobile viewports.

ACHIEVEMENTS & RECOGNITION

- Awarded **"Outstanding Performer of the Year"** in December 2024 for exceptional technical contributions and innovative problem-solving approaches
- Successfully mentored and onboarded **2 junior frontend developers**, establishing coding standards and best practices documentation for the team
- Established unit testing practices using **Jest** to validate component behavior and prevent regressions during the migration process.

EDUCATION

Madanapalle Institute of Technology and Science **2019 – 2023**
Bachelor of Technology in Computer Science and Engineering - ***CGPA - 9.46*** Madanapalle, India
